Examination of Application #10/803,262

1. Claims 1-37 of application 10/803,262, filed on 18-March-2004, are presented for examination.

Claim Rejections under 35 U.S.C. § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title.

2.1 Claims 1-6, 10-26, 28-33 and 35-37 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The invention claims, in claim 1, "A method for simulating a stochastic discrete event system."

2.2 This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful, concrete and tangible result.

Specifically, the claimed subject matter does not produce a tangible result because the claimed subject matter fails to produce a result that is limited to having real world value rather than a result that may be interpreted to be abstract in nature as, for example, a thought, a computation, or manipulated data. More specifically, the claimed subject matter produces an intermediate simulated result for each factor using the factor processing module provided for the factor, and logically combining the intermediate simulated results for all of the plurality of factor processing modules together to produce simulated results of the stochastic discrete event

In re Application of: Keane

system. This produced result remains in the abstract and, thus, fails to achieve the required status of having real world value, because simulated results of the stochastic discrete event system are not conveyed to the real world via a practical application and/or a tangible result.

2.3 Furthermore, the Examiner respectfully posits that the claims of the present invention do not meet the criteria for a statutory process, because the claimed method is determined to be a method for mathematically simulating a stochastic discrete event system, converting one set of numbers into another set of numbers, whereby the method does not manipulate appropriate subject matter, and thus cannot constitute a statutory process (MPEP Section 2106.02).

Claim Objections

3. Claims 7-9, 27 and 34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Allowed Claims

4. Claims 1-37 are deemed allowable over the prior art of record at this time, pending resolution of any rejections noted above, as the prior art of record does not specifically teach the claimed simulation of system dynamics of a stochastic discrete event system.
